

# IRLP Experimental Reflector 0087 – Policy Update (Revision 4)

## Bridge & Whitelist Exception

This IRLP Experimental Reflector 0087 is bridged to AllStar Hub **42121** using ASL. The AllStar Hub 42121 connection is an intentional and permanent bridge to the Experimental Reflector 0087.

Because this bridge is required for system operation, the AllStar Hub 42121 connection is **explicitly excluded from enforcement actions** such as: Auto Listen-Only (audio suppression) Auto Blocking Watchdog escalation rules This exclusion is enforced through the reflector whitelist mechanism.

**All other IRLP nodes remain subject to watchdog enforcement.**
