

UPDATED CROSSLINKING POLICY

Effective Immediately

This policy defines the rules and consequences regarding crosslinking of AllStar, IRLP, EchoLink, and digital voice systems. Its purpose is to maintain system stability, prevent nonstop audio and timeouts, and provide a controlled environment welcoming users from multiple platforms.

The OHIO Conference is officially welcomed as part of the network design. AllStar Hub 42121 operates as the primary integration hub and maintains a permanent, controlled bridge to IRLP Experimental Reflector 0087.

RULES

1. No Crosslinking Without Permission

Crosslinking any nodes, reflectors, hubs, or conferences without explicit authorization is strictly prohibited. Violations may result in immediate disconnection or blocking.

2. Permanent & Approved Connections

IRLP Experimental Reflector 0087

A permanent, controlled bridge exists between IRLP Experimental Reflector 0087 and AllStar Hub 42121. This connection is managed to prevent timeouts and audio flooding.

Approved EchoLink Access: IRLP0087 EchoLink Conference – 505489

3. Approved Conferences and Access

OHIO Conference – 493122

The OHIO Conference is welcomed and approved for user access from AllStar, EchoLink, DMR TGIF, and YSF users, providing stable multi-network participation.

HOTMOVE2 Conference

HOTMOVE2 is restricted to specific, pre-approved nets only and must be disconnected immediately after the net concludes. Unrestricted or continuous use is not permitted.

4. AllStar Hub 42121 – Primary Integration Hub

AllStar Hub 42121 is running on ASL and serves as the primary integration hub. It supports connectivity for IRLP, AllStar, EchoLink, DMR TGIF, YSF, and HamsoverIP.

HamsoverIP Extension: #15028

5. Additional AllStar Hubs

Hubs 40878 and 55804 may not be crosslinked to other hubs or conferences without explicit permission. Unauthorized hub-to-hub linking will result in immediate blocking.

6. Web Transceiver Usage

Web transceivers must connect directly to Hub 42121. Bridging through personal nodes is prohibited.

7. Disconnect Before Connecting Elsewhere

Users must disconnect from their current system before connecting to another system. Remaining

connected while linking elsewhere is treated as crosslinking.

8. Stat Reporting Requirement

All AllStar nodes must have stat reporting enabled. Non-reporting nodes may be disconnected or blocked.

9. Contact Information Requirement

All nodes must have a valid email address listed on QRZ. Nodes without valid contact information may be blocked.

ENFORCEMENT ACTIONS

Nodes detected improperly crosslinking systems, using unapproved connections, or violating HOTMOVE2 restrictions will be immediately disconnected and blocked.
